

JETFILL BIG BAG FILLER

QUALITY HANDLING EQUIPMENT

The Tong JetFill Big Bag Filler is a high capacity, yet gentle machine for filling big bags of up to 1200kg

Belt powered platforms lift empty bags to a reversible conveyors which feeds the crop into bags. As the bag fills, crop sensors lower the bag platform until the bag is full, at which point the conveyor belt stops and reverses to fill the bag on the other side of the machine.

When the bag is full the bag platform lowers further so the bag is suspended by its handles. The bag stretches so the crop is safely in the bag, whilst the bag sits firmly on a pallet. Solenoid rams release the bag handles and the bag can then be removed on its pallet by a forklift. Minimal drop ensures gentle handling of crop at every stage of the bag filling process.
