

# SAMPLE WASHERS

ROBUST, RELIABLE & EXPERTLY ENGINEERED

Available in two models as standard; elevator model and basket model. Tong's sample washers are based on the same design principals as larger barrel washers, but on a smaller scale; with a 750mm long x 500mm diameter barrel.

Offering effective washing of crop samples. Manufactured in mild or stainless steel, the economy basket model features a basket at the outfeed end of the tank. That is lifted out manually when the sample has been washed. The elevator model works like the larger barrel washers and gently elevates washed crop out of the barrel tank.
