

# VEGETABLE DRYER

## INVERTER DIRECT DRIVE ON EVERY ROLLER

**The newly designed Tong vegetable dryer offers the ideal solution for drying crop after washing, in a gentle, economic and efficient way.**

Tong's sponge drying systems are built with efficient drying and ease of maintenance in mind, offering effective drying of crop for optimum washing results. Featuring Tong's Blue Inverter Technology for power on demand, Tong's newly designed vegetable dryers are driven by two inverters – powering front and back sections of the dryer independently, for improved control of speed and handling. In addition, if you're looking for the latest advancements in vegetable drying, new models of Tong's vegetable dryers feature an inverter direct drive motor on every shaft, for improved energy efficiency, refined control and minimal maintenance.

For ultimate longevity, Tong's sponge dryers are manufactured using hard wearing donut-style sponge discs or heavy duty felt.

- **Standard models including 7, 10 or 15 rollers**
- **Standard widths ranging from 600mm to 1.5 metres**
